1 Developing an XML framework for metadata system
Ruey-Shun Chen, Shien-Chiang Yu
September 2003 ISICT '03: Proceedings of the 1st international symposium on Information and communication technologies
Publisher: Trinity College Dublin
Full text available: pdf(383.59 KB) Additional Information: full citation, abstract, references

Metadata is the media to describe the management and storing of kind of knowledge and well-preserved objects. Thus, with the compatibility of all various metadata, we can integrate related knowledge and with unification and management of information ...

Keywords: DTD, XML, metadata, schema, system design

2 A component-based multimedia a data model
Alejandro Jaimes
November 2005 MHC '05: Proceedings of the ACM workshop on Multimedia for human communication: from capture to convey
Publisher: ACM
Full text available: pdf(190.70 KB) Additional Information: full citation, abstract, references, index terms

In this position paper I propose a conceptual model for multimedia that consists of physical (from layout to cameras), conceptual (e.g., meeting types, actors), sensory (audio-visual capture), and content (syntax and semantics) components. I argue that ...

Keywords: multimedia analysis and retrieval, multimedia production

3 Keeping track of crosscutting requirements in UML models via context-based constraints
Felix Bübl
October 2006 OOPSLA '06: Companion to the 21st ACM SIGPLAN conference on Object-oriented programming systems, languages, and applications
Publisher: ACM
Full text available: pdf(565.25 KB) Additional Information: full citation, abstract, references, index terms

One crosscutting requirement (also called aspect) affects several parts of a software system. Handling aspects is well understood at source-code level or at runtime. However, only a few aspect-oriented approaches handle other software artefact types, ...
